

# CLASS GROUND BLOCK

CLASS GROUND BLOCK is a high-strength, lightweight, and durable concrete block designed for use in ground applications. It is available in various sizes and configurations to meet different project requirements. The block is made of high-quality concrete and is designed to provide excellent load-bearing capacity and resistance to weathering and corrosion. It is ideal for use in foundations, retaining walls, and other ground structures. The block's unique design allows for easy installation and provides a secure, long-lasting foundation for your project.
