

## Joint vs. Block

The difference between a joint and a block is not just a matter of the physical nature of the material, but also of the way it is used. A joint is a connection between two pieces of material, while a block is a single piece of material. The difference is not just a matter of the physical nature of the material, but also of the way it is used. A joint is a connection between two pieces of material, while a block is a single piece of material. The difference is not just a matter of the physical nature of the material, but also of the way it is used. A joint is a connection between two pieces of material, while a block is a single piece of material.
