

GLASS CELL/ traffic light

The glass cell structure is a key element of the design, providing a modern and functional traffic light solution. It is designed to be integrated into the urban fabric, enhancing the overall aesthetic of the street. The structure is made of high-quality glass and metal, ensuring durability and safety.

The diagram illustrates the internal structure and components of the glass cell traffic light. It shows how the glass cell is integrated into the overall design, providing a modern and functional traffic light solution. The structure is designed to be durable and safe, ensuring long-term use in an urban environment.
